

Overview

The Albutt E Series forks and grabs are designed to give a heavy duty alternative to the normal loader fork attachments. Available with KV type or Hardox tines each model can be spec'd with or without a grab. High capacity hydraulic cylinders sit on top of the grab, giving a wide opening (1060mm). This means the grabs can be used for a variety of applications from mucking out to moving bales. Bolt on brackets mean that the fork can easily be altered if you decide to change your loader brand. Standard KV Grabs are normally kept in stock.

Features

- Solid fork back – keep carriage and hydraulics clean
- Wide opening grab; 1060mm
- 768mm base tines; KV or Hardox options
- Cut outs in fork back for visibility
- High capacity hydraulic rams
- Optional side tines; Hardox
- Suitable for a variety of applications
- Hardox tines welded into tine holder
- KV tines bushed into tine holder
- KV grabs normally in stock
- Suitable for most tractor loaders
