

Overview

The Albutt F501 Multi Bale Stacker is designed to offer a quick and efficient means of moving and stacking round or square bales. The synchronised arm movement prevents bales from moving when unloading. The tine spacing allows for 2 round bales to be carried at a time or 2/3 square bales depending on makes. Suitable for Telehandlers, the central bracing profiles are manufactured from Hardox for ultimate strength. All tines are bushed into the box section frame. Bottom straight tines give more support when stacking rectangular bales.

Features

- Handle square or round bales
- 1200kgs lift capacity
- Suitable for Telehandlers
- Brackets angled to help loading (brackets extra)
- Synchronised wing movement
- Handles all sizes Hesston bales; 2 or 3
- Stack round bales in columns or rows
- Stack in field, barn or on a lorry
- Eliminate double handling
- Utilise barn space
- Tines are released from bale before movement of machine
