

## Overview

The Albutt high capacity Clam Shell bucket is designed for the bulk handling of such materials as grain, woodchip, and manure. As the floor opens to release material, it means larger volumes can be moved as the load centres are kept closer compared to conventional high tip buckets. There are further benefits for those who are using machines with limited reach when loading high sided trailers as the bucket doesn't have to be dumped forward to be emptied.

The Bucket utilises high tensile steels in its design (Hardox and Domex) and features high capacity hydraulic cylinders for a positive bucket opening. Rams are covered for spill protection. All models feature a boron 500 leading edge as standard.

## Features

- HB500 Brinell cutting edge
- Hardox and Domex high tensile steels throughout
- Complete with quick release brackets for telehandlers or loaders
- Floor opens to release material – keeps load centres close and maintains height
- High capacity hydraulic cylinders
- Full length side gussets
- Improve cycle times
- Hydraulic cylinders covered
