

OVERVIEW

The Albutt **Extenda** Weight Extension multiplies the achievable weight from any ballast with 3 point linkage by extending its distance away from the machine. A cab operated hydraulic ram operates the scissor action, pushing the weight away and subsequently increasing machine traction against its counterweight. Ideal for tough ground conditions, **Extenda** will carry all makes of weights or weight boxes with 3 point linkage up to 2000kg. Fully extended, a 2000kg weight will have the effect of up to 4000kg.

WORLD PATENT

- Unladed weight 500kg
- Ram operated scissor action
- Picks up 3 point linkage weights/weight boxes
- Offers upto 100% more weight when fully extended
- Suitable for tough ground conditions
- Supplied with hoses
- Stand legs
- Plated rams
- Normally in stock

MODELS

Model	Width	Capacity	Weight
AEW500	1000mm	2000kg	500kg

STABILITY
Significant increase in stability and decrease in wheel slip.

SPEED
Speed increase from 5 to 40% during the various operations (plowing, re-pitting etc.)

ADHERENCE
Possibility to lift heavier implements with the tractor without lifting it or losing grip.

CONSUMPTION
Reduction of consumption in various processes. (e.g. 8% plowing)
