

# SHEAR KING EJECTOR OPTION

## OVERVIEW

The Albutt Attachments Shear Grab Ejector system is unique in the fact that it will push out silage in a solid block. This means that when used in conjunction with a robot feeding system, blocks can be cut in the morning, placed in a 'kitchen' area and left in a solid state throughout the day. Solid blocks maintain calorific value by not allowing secondary fermentation through air entering the block face. The ejector also aids wheeled loaders with restricted lift height in loading into feeder wagons.

## FEATURES

- Currently available as an optional extra on the Albutt Shear King range of Shear Grabs
- Smaller models coming winter 2020
- Utilises high tensile steel – Hardox & Strenx
- Operates through a sequence valve system – no requirement for an extra service to the front of the machine
- Pushes off solid blocks
- Can be retrofitted to all Shear Kings built from 2020
- Suitable for farms with robot feeding systems
- Ideal for wheeled loaders with restricted lift height
